### **Background on Shaw River**

Shaw River is an active manganese focused explorer, currently exploring five Pilbara manganese projects. Shaw River also owns an 80% interest in a Ghanaian manganese project. In 2010 Shaw River's active manganese exploration program has included extensive drilling over its Baramine project.

On 13 December 2010, Shaw River announced the acquisition, subject to shareholder approval, of an advanced Namibian manganese exploration asset for US\$15.5 million (AUD15.8 million). This acquisition is expected to settle in the first quarter of 2011.

Shaw River is continuing its active manganese project acquisition strategy as it builds its manganese project pipeline and moves towards resources and production. Shaw River offers excellent exposure to this strategic metal, critical to the global steel industry.

Shaw River's largest shareholder, Atlas Iron (45.2%) is a strong supporter of Shaw River's manganese strategy.
